Responsible Archival Stewardship Through Reappraisal and Deaccessioning

CORY NIMER AND J. GORDON DAINES III

Abstract

One of the challenges facing archives and special collections librarians is balancing their collecting with their available resources, including human resources, physical space, and time. This session will present the results of a recent survey on the use of reappraisal and deaccessioning in university archives and special collections repositories to help archivists responsibly manage their holdings. The analysis will update research by Marcella Huggard and Laura Uglean Jackson from 2017 on the adoption of these methods by archival repositories, with an added focus on media-based differences in archival administration. Other areas of inquiry included the level of adoption of the OCLC Total Cost of Stewardship Model and the programmatic use of reappraisal within archives and manuscript repositories. The survey was distributed to library representatives from the 102 U.S.-based academic libraries that are members of the Association of Research Libraries.

About the authors:

Cory Nimer is the university archivist at Brigham Young University. He has also been involved in archival descriptive standards development and training with the Society of American Archivists, and has published on descriptive practice, archival literacy, and the history of archives in the inter-mountain West. He has a master's of library and information science from San José State University and a master's degree in History from Sonoma State University.

J. Gordon Daines III is the Research and Instruction Services archivist and Yellowstone National Park collection curator in the L. Tom Perry Special Collections at Brigham Young University. His research interests include western exploration, leadership, the development of primary source literacy skills, the history of the archival profession in Utah, managing digital records, and business process management as applied to archives.
