

**CrossRef Report** on the number of Digital Object Identifier resolutions for *The American Archivist*. These statistics give an indication of the traffic generated by users clicking DOIs for articles in the journal. The legend for the chart and a general explanation of the report is at the end of this report. As you are probably aware, CrossRef is the official DOI registration agency for scholarly and professional publications. *The American Archivist* began using CrossRef when it switched to Allen Press in 2015.

**Report for Publisher: Society of American Archivists**

**Resolutions for last 12 months.**

We continue to filter out known search engine crawlers. This month they accounted for 94,721,611 resolutions.

Months	2017-12	2017-11	2017-10	2017-09	2017-08	2017-07	2017-06	2017-05	2017-04	2017-03	2017-02	2017-01	2016-12
Resolution Attempts	2,167	2,182	2,672	2,720	1,659	1,490	1,435	1,566	1,490	2,712	4,248	3,635	2,691
Resolution Successes	2,101	2,164	2,628	2,707	1,649	1,474	1,390	1,563	1,471	2,243	4,239	3,630	2,663

Total Attempts for all members	204,714,141	200,175,219	205,511,935	210,801,824	209,212,315	222,241,050	165,090,929	235,297,488	207,126,482	369,547,392	189,542,616	224,995,778	290,164,626
<hr/>													
<p>The overall resolution failure rate for all publishers is 2% and your failure rate is 3%. These failures may result from deposit errors by the publisher or from linking errors being made by end users. If your rate is significantly above zero or the overall average please investigate to determine the cause.</p>

Resolution Counts by Publication Title		
Publication Title	Total Resolutions	Unique DOIs
The American Archivist	2,101	540

CrossRef has created a system to automatically email publishers statistics on the number of DOI resolutions through the DOI proxy server (<https://doi.org/>) on a month-by-month basis. These numbers give an indication of the use of your DOIs and the traffic coming to your site from users

clicking DOIs. The DOI links are largely from links in other publishers' journal references to your articles, but they are also from DOI links in secondary databases, links from libraries using DOIs, and even DOIs in used in print versions.

When a researcher clicks on a DOI link for one of your articles, that counts as one DOI resolution. A DOI resolution is when a DOI is "clicked" - for example, clicking on <https://doi.org/10.1038/nature02426> counts as one resolution to Nature. No information is captured about who the user is or where they are coming from. The information on DOI resolutions is captured by the web server logs on <https://doi.org/> which is run by CNRI on behalf of the International DOI Foundation. These numbers are not a precise measure of traffic to your site - cached articles, search engine crawlers not following re-direction and traffic that is directed to a locally appropriate copy through a library link resolver would be included in these numbers, but would not result in inbound traffic on your website. Nevertheless, these numbers provide one important measure of the effectiveness of your participation in CrossRef.

In March 2004, the report on DOI resolutions through the main <https://doi.org/> proxy server was updated. This report now tracks the number of DOI resolutions based on the owner of a DOI:

- Resolutions : attempted resolutions of DOIs based on the owner of the DOI.

**Top 10 DOIs** is a list of the most popular DOIs that were successfully looked up and how many times each was looked up.

**Resolution attempts** is the same as total "Resolutions" above.

**Resolved at handle** is the number of resolutions that successfully looked up at doi.org.

**Handle failures** is the number of resolutions that failed to look up at doi.org, either due to a technical problem or because the DOIs did not exist.

**Resolved at local link server** counts resolutions that were looked up at local link servers.

**Unique DOIs attempted** is the number of unique DOIs represented in the total "resolutions attempted" from above.

**Unique DOIs resolved at handle** is the number of unique DOIs represented in the "resolved at handle" count from above.

**Unique DOIs that failed at handle** is the number of unique DOIs represented in the "handle failures" count from above.

**Unique DOIs resolved at local link server** is the number of unique DOIs represented in the "resolved at local link server" count from above.

The below table contains all of the DOIs that failed to resolve followed by the count indicating the number of times that DOI was attempted.

**"na" - means that data is not available for that month and type.**

If you have problems with this report, contact [support@crossref.org](mailto:support@crossref.org).
